HARBOUR BRIDGE DISASTER

Road, Rail Traffic In City Paralysed

All road and rail traffic to the northern suburbs has come to a complete standstill following the disastrous cutting of the Harbour Bridge late last night.

Thousands of motor vehicles are jammed on both the northern and southern approaches of the bridge. Police leave has been cancelled and military recruits called up from Liverpool and Singleton Camps to handle the traffic congestion.

Police Warning

All transport in the city is at a standstill as drivers, who have been warned to avoid the eastern side of the city, have been met with uniformed police at all major roads.

The disruption of communication has been caused by the cutting of the Harbour Bridge pylon, which has led to the collapse of the eastern side of the city.

European Power Enters Space Satellite Race

MONACO, Monday (AAP Report) - Prince Rainier announced today the successful launching of a Monacan satellite. After weeks of research and preparation, it was finally launched. The Prince commented, "The satellite is orbiting the Earth at an altitude of approximately 500 kilometers." About the satellite's mission, the Prince added, "It will be used for communication and broadcasting purposes." The satellite has already transmitted messages to various countries.

Cuban Leader Declares War With Russia

The Cuban Prime Minister, Dr. Fidel Castro, last night announced that the Cuban nation was in a state of war with the U.S.S.R. as of four o'clock that afternoon.

In his statement, the Prime Minister said, "The attack on Cuba by the U.S.S.R. was a clear violation of international law and a threat to the peace of the world. Cuba has been forced to defend itself against this aggression."

Police confirmed that the country's military forces were fully mobilized and prepared for any possible conflict.

Hoaxer worries residents

Residents of the northern suburbs of Sydney are concerned about the recent rash of hoaxes. Parents have reported that their children have been领域， causing widespread panic in the community.

Ansett Makes Offer to PAA

The managing director of Ansett-ANA, Mr. John Ansett, announced today that his company has offered to purchase a controlling interest in Pan American Airways for $225 million. Ansett has been involved in a long-standing rivalry with Qantas, and this offer is seen as a significant move to compete in the international market.

Labour Club to Be Formed

An attempt will be made to form a student union at the University of New South Wales. The university has faced criticism for its lack of an established student union, which is seen as a key issue in the promotion of student rights and interests.

UNI. APPEAL AIMED TO SAVE LIVES

Twice as many children under 13 years die from burns and scalds in Australia than would be the case if our hospitals were equipped with special units devoted exclusively to the treatment of burns.

Australia, as yet, has no specialised Burns Treatment Units, but it is proposed to establish the first at Prince Henry Hospital at La Perouse in the near future and the proceeds from today's foundation appeal will be directly applied.

Burns treatments, according to the same statistics above, 500 of the 2,400 children who would have died.

Many Lives Saved By Units

With the Burns Unit now nearing completion, Professor William of the Department of Burns, and one of the greatest causes of death, is now reduced to one or several lives.

Expensive line of both medical and nursing staffs also, to a substantial amount from the $4,000,000,000 of 1920.

The appeal is that the annual budget for the treatment of burns in Australia should be increased from the present $4,000,000 to the proposed $10,000,000.

Interest to The Students

According to the investigations of the effects of this condition, it is evident that the health of all students is deteriorating.

The housing problem has been a constant one, yet it has been neglected.

Grimes Act Repressive

The legislation passed last year is in no way effective in the prevention of any of these acts of violence.
A Programme For The Second Federal Party

Without distorting the rights of the individual as the punishment of the active small minority of men, the suggestion that even the few who are employed must receive a larger reward than a labourer. The third aim of the organization is to bring about the Co-operative Commonwealth of which several have been made a success.

The House of Representatives is the Lower House of the Commonwealth Parliament. It consists of members elected by the people who are qualified to vote and are not disqualified by law. The House is elected for a term of three years, but may be dissolved by the Governor-General at any time during that period.

The Hon. W. E. B. Thomas, M.P., Attorney-General for the Commonwealth, has recently given an important speech on the subject of the proposed Commonwealth Bank. He declared that the institution was necessary to meet the requirements of the country. The Bank will have power to issue notes and to make advances on approved securities. It will also have power to purchase and sell foreign exchange and to make advances on foreign currency.

The Prime Minister, Mr. Stanley Bruce, M.P., has also spoken in favour of the proposed Commonwealth Bank. He said that the institution was needed in order to meet the requirements of the country. The Bank will have power to issue notes and to make advances on approved securities. It will also have power to purchase and sell foreign exchange and to make advances on foreign currency.

The Senate is the Upper House of the Commonwealth Parliament. It consists of members elected by the people for a term of six years, but may be dissolved by the Governor-General at any time during that period.

ARCHITECTURE IN SYDNEY

GERARD MCDONELL

I WILL remember several years ago re-entering Sydney Harbour after two years away and remembering how wonderful Sydney was. And so it is. I remember also when I moved about Sydney again how had it was. How can white be black? It all depends on the point of view. Sydney's setting is seen from the Harbour is superb, with its folding hills, its bays, its rocky foreshores and ample trees.

From within, Sydney's good buildings old or new, are markedly of great importance, but buildings as good they are, there are occasional vistas. Some, however, are seen, from the height of the city, from the height of the buildings, from the height of the hills, and in time, from the height of the sky. The beautiful buildings of Sydney are usual in style, the great buildings are always of old, and new with some few individually appealing to the eye as such as to make them truly desireable in the way of observation, study and a lasting impression.

The individual building as seen from its height, is often the most interesting thing they can see in a city. It is in the places that are seen, that the general pattern of building is seen, and the space we observe from the building is seen, and the building is seen.

The heights of Sydney, its magnificent divided architecture, is not only grand, but the architecture of this city is not seen in the same way as in the past. The Sydney of today is not seen in the same way as it was in the past. The Sydney of today is seen from the heights of the city, from the height of the buildings, from the height of the hills, and in time, from the height of the sky.

Mr. McDonell is a senior lecturer in the School of Architecture at the University of New South Wales. In this article he discusses some of the better and some of the worst aspects of Architecture in this city.

The greater part of this article is devoted to the subject of Sydney's architecture, where Sydney has been a very interesting place for the architect, and where the architect has been able to make his mark. The subject of Sydney's architecture is not a new one, but it is worth remembering that Sydney has a long and interesting history of architecture, and that the architect has been able to make his mark.

The subject of Sydney's architecture is not a new one, but it is worth remembering that Sydney has a long and interesting history of architecture, and that the architect has been able to make his mark.
A LOOK AHEAD IN TRANSPORT

ONE does not need to go abroad with the specific object of studying transport developments to become aware that transport revolution is in progress. We all know, of course, that the history of transport is in no small measure the history of man — the roads of the Romans, the hips of the Elizabethans, the railways of the industrial revolution have marked great eras of human development.

As each succeeding age increases man's ability the better it is to see that he has already and the world itself is a place his infinite travel desires. To continue his progress in his potentialities, the dominant challenge of the 20th century month.

Its universality its speed both are bringing revolutionary changes to this planet.

The development of the aeroplane is one of the most spectacular developments which stretch for centuries. The world used to be measured in miles, now in minutes, and the next generation will be measured in seconds.

In the east coast of America there is already a 1,000 miles of coastal waterways where the Mississippi River and the Great Lakes. And this is only the beginning.

As we turn our attention to the speed capability of the motor car, we find that the motor car has made it possible to travel in a matter of minutes what used to take hours or even days. The motor car has revolutionized travel, making it possible to travel from one end of the country to another in a matter of hours.

Professor Blunden discusses the problems raised by modern transport, and mentions some of the more recent advances in present-day made overseas.

The University Radio Service Extended

The university's radio station, VL2UV, will provide greatly expanded services in 1962. The construction of proper broadcasting facilities, the installation of a more powerful transmitter, and an increase in the number of courses available and in broadcasting time, are expected future developments.

Associate Professor Derek Broadbent, Coordinator of the Post Graduates in Radio studies which Radio University has been conducting since last year, said that approximately 12,000 square feet would be available for studios, production and teaching offices, which will be located on the fourth floor of the Biological Sciences Building now under construction.

The course of study includes Introduction to Radio Engineering, Production, Aids to Radio, and Technical Administration. The course is given by several of the leading radio engineers in the country.

In addition, a special summer course on the theory and practice of radio engineering will be given on the campus.

The University Radio Service has been in operation for the past two years and has proved to be an invaluable service to the students and faculty of the university.

University Radio Service

The University Radio Service is now available to all students and faculty members of the university.

University Of New South Wales
Students March On Sydney
In First Foundation Day

Students of the University of New South Wales will today parade through the centre of Sydney on the first Foundation Day ever celebrated by the University.

The procession will begin at 11 a.m. and will proceed along George Street, London, Middle, Market, Elizabeth, Bridge and William Streets, and finish at Martin Place. The procession will consist of eight hundred students, who will be accompanied by sixteen bands from various schools in Sydney. The marchers will be dressed in the University's traditional academic garb and will carry banners and flags bearing the University's crest.

An after-dinner feature will be a night of music and dance at the University Club, which will be open to all students.

For more details, please see page 2.

U.N.S.W. Medical Courses To Start Next Year

The University of New South Wales Faculty of Medicine will commence pre-clinical courses from March next year.

Students will begin the second year of the course having done the common science first year in 1961. The anticipated enrolment next year is forty students.

A new building for the Faculty of Medicine and Biological Sciences is being built on the existing site of the University's Medical School. The building will be completed by the end of 1962 and will provide adequate facilities for the future development of the Faculty.

The Medical and Biological Sciences building will be dedicated to Sir Edward Hirsch, who made a substantial donation to the University.

The Medical School's new building will be opened by the Governor-General, Sir William McMahon, on March 1.

The procession will follow a route through the centre of Sydney and will end at the University Club.

For more details, please see page 2.

The Professor Orr Case Reviewed

This detailed, absorbing, passionate and horrifying book must be read, and read immediately, by anyone interested in the standing of our universities. The Orr case has been of concern to academics for some time, but interest has fluctuated as each new view of the case is presented.

One of the difficulties confronting anyone interested is finding a way among the tangled web of the case, and the existence, size and quality of the evidence. While the evidence is not a matter of record, it is sometimes hard to make sense of.

Theatre comes to the Churches

"Orr" by W. C. Eddy is reviewed here by Mr. R. S. Walters, Lecturer in Philosophy at the University of New South Wales.

Theatre is coming to the Churches in the form of a new play, "Orr," by W. C. Eddy. The play is set in a small town and tells the story of a man who is tried for murder. The trial is a complex one, involving many witnesses and revealing the town's secrets.

The play is being performed by the University's Drama Society and is directed by Professor Edward Hirsch. The production is a major event in the University's cultural life.

The play is being performed by the University's Drama Society and is directed by Professor Edward Hirsch. The production is a major event in the University's cultural life.
This article, written by Professor C. H. Munro of the School of Civil Engineering in the University of New South Wales, discusses in technical detail the processes of demineralising salt and brackish water. He discusses various processes in use and the cost of operation of each with special reference to Australian needs.

"Demineralisation being, as it were, how we can improve the quality of water for industrial and domestic purposes, is a matter of some importance in the mineral industry. The removal of dissolved solids from water is a fundamental process in many industries, and the cost of demineralisation can be a significant factor in the cost of producing a product.

"The modern methods of demineralisation are based on the use of ion exchange resins, which are highly effective in removing dissolved solids from water. These resins can be reused many times, and the cost of demineralisation is significantly lower than traditional methods such as distillation or filtration."

"The University of New South Wales has a large research program in demineralisation, and the results of this work are being used in practical applications. The University is currently involved in demineralisation projects in the mining, food, and chemical industries."

"In conclusion, demineralisation is an essential process in many industries, and the University of New South Wales is making significant contributions to the field. The use of ion exchange resins offers a cost-effective and environmentally friendly method of demineralisation, and the University is committed to further developing this technology.

"R. S. Walker"
Timely changes in the White Man's Journal are at present taking place, and on all the indications will continue to take place for some time. And whether or not you agree with what is being done, and whether you believe that the changes are necessary, you will agree that what is is utterly different from what was.

To begin the story, Johnson, from being a hard-faced Old Man (Australia for the White Man) was founded by John Johnson, a son of Mr. J. Archibald as a literary and gruff journal, in its youth a hard and cruel child, not hesitating to criticise anything and everything. It is not a matter of various digressions—there were many—and they were all close to the heart. The days of Goondi Woomera and the like are gone, and its spirit and basic allure, the craft proposed and perfected, the line of thought is the same, and all the rest of the old White Man. The life of the White Man Journal continues, and it is not a matter of different digressions. The days of Goondi Woomera and the like are gone, and its spirit and basic allure, the craft proposed and perfected, the line of thought is the same, and all the rest of the old White Man.

Early this year the proprietor of The Bulletin was forced by financial circumstances to sell the paper to Consolidated Press. The Editor of Thangunda discusses the changes that have been made in this journal, and makes some prediction of the Bulletin's eventual fate.

Our friendly University press is guaranteed to keep your library free of slumber, spotters, nightshades and itinerant caricatures. No expensive upkeep problem—just a occasional pint of human blood.

Buy Australian Made

Three Grains Of Barley

The beginning of the affair happened on Good Friday in the year 1961. The Royal Easter Show was on and I had bought two rulers in a sample bag. So you see the thing was quite by chance.

The first rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The second rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The third rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The fourth rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The fifth rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The sixth rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The seventh rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The eighth rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The ninth rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The tenth rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The eleventh rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The twelfth rule was:

1. Get a gun
2. Stand near the wine
3. Take a few more

The Crime of Big Business

"Some people who have spent years castigating the evils of poverty," to quote Lord Hesketh, once Unilever's British Chairman, "now seem disconcerted by prosperity, they make very sour noises about it. We cannot see their logic. We like to see people well off, and although we realise that prosperity brings new and unfamiliar problems, we would much rather face them than poverty's ancient curse."

No quarrel with Lord Hesketh. Our own experience is not its economical prosperity but some of the subtle implications of its method of execution.

A FEW YEARS back I met a very fine lady who had been a very fine lady and still was very fine lady, but she had been a very fine lady and was still a very fine lady. She was Mrs. Mary Hill, a lady of great beauty and grace. She was the wife of a man who had been a man of great ability and had always been a man of great ability. He was a man who had always been a man of great ability. He was a man who had always been a man of great ability.

His name was Hill. His name was Hill. His name was Hill.

He was a man of great ability. He was a man of great ability. He was a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

He had been a man of great ability. He had been a man of great ability. He had been a man of great ability.

Decline and Fall

No. 1. The Physicist

ADVENT—Appears in a strange northern city in winter. A cold wind blows, and it's snowing outside. The air is freezing, and the sky is gray.

A young man is walking down the street, looking for a place to warm up. He sees a building with a sign that says "Winter Wonderland," and he goes inside.

He walks into a large, warmly lit room. There are lots of people there, drinking hot chocolate and eating cookies. The man is happy to be warm, but he wonders how long he can stay here.

B.J.

SUCCESS. Invents large and sophisticated robot for exploring the depths of outer space.

TRIUMPH. No successful mission in space due to equipment failure.

TEMPTATION. From food rationing, persuasive discussion of fundamental monetary physics, and conditioned reflexes prove too strong.

"Esmerald" promotes Bird Watcher Society

The visit of Esmerald, a champion of the old-fashioned artist, has promoted bird watching among the masses.

The Avian Research Institute of New South Wales has attended and investigated the bird-watching enthusiasm of Esmerald, volt, and several others. It was at this meeting that the idea of promoting bird-watching was born.

Stamp-sending to the opposite sex.

"Esmerald" is a champion of the old-fashioned artist, and his enthusiasm for bird-watching has inspired many others to follow his lead.

Psychologists at the University of New South Wales have studied the phenomenon of the "Esmerald Effect" and found that it is more than just a passing fad. Many people are finding this new pastime to be very satisfying, and it is likely to continue.
The Bond Of The Concept Of God

A long time ago, men and women, sat in awe of the God, the All Knowing, the All Powerful. They believed in the stories of the Bible, the stories of the prophets. They were taught that God was the creator of all, that he was watching over them, that he was always there for them. But what happens when we lose faith? What happens when we start to question the existence of God?

Christian Church gives a historical view of the concept of God. Although many people believe in the concept of God, they do not necessarily believe in a specific concept. The concept of God has evolved over time and has been interpreted in different ways by different cultures and religions.

The concept of God is often associated with the idea of a higher power or a supreme being. This concept has been present in many cultures and has been interpreted in various ways. Some people believe in a personal God who is active in the world, while others believe in a God who is more remote and less involved.

The concept of God is often linked to the idea of morality and ethics. Many people believe that a God exists to impose moral laws on the world and to punish those who break them. This concept of God has been used to justify many forms of oppression and violence.

However, the concept of God is not without its critics. Many people believe that the concept of God is a product of human imagination and that it is not based on any real evidence. They believe that the concept of God is a way for people to justify their own beliefs and actions.

In conclusion, the concept of God is a complex and multifaceted idea that has been interpreted in many different ways by different cultures and religions. It is a concept that continues to evolve and change over time.
It was a summer evening. Young Shepard's work was done and he had his cape put away. He was sitting in the garden, hands behind his head, when he saw something which had not been there before. It was a little, scrawny, filthy, skinny, green thing. It had no name and it had no identity. It was just an entity of some kind, floating in the air.

Young Shepard took it in his hand and looked at it. It was a small creature, with no legs, no arms, no eyes, no nose, no mouth. It was just a mass of protoplasm, a blob of protoplasm, a mass of protoplasm.

He knew it was a thing of the past, but he couldn't help admiring it. It was beautiful, it was lovely, it was perfect.

**THE QUICK AND THE DEAD**

*George Caleb*
Since November last year, Credite has dictated fashion. In designing for a preferred stock, he has deflated figures, checking those winter inflationary trends. So, darling, you will still believe to be squeezed and poured into debit-elimination creations adapted from the Jackie Kennedy Look.

Do not let your budget dampen your spending. The look is new, new, new, and oh so versatile! The breading is tight-line. Broken black and cautious caviar—these are just some of the scintillating tones in this new range.

The Credite 'Squeezed' Look

The DEMINERALISATION OF SALT WATER

Continued from page three

40 per cent of your budget, with a high of 60 per cent in some cases. In an effort to keep the water clean, the temperature is lowered, and the water is treated with ozone and chlorine. A new type of water treatment is being used, which involves the use of ultraviolet light and ozone. This process is known as the Credite process, and it is believed to be the most effective method of removing impurities from water.

The Credite process is a three-step process involving filtration, reverse osmosis, and ultraviolet light. The water is first filtered through a bed of gravel and sand to remove larger particles. Then it goes through a reverse osmosis membrane, which removes smaller particles and dissolved solids. Finally, the water passes through an ultraviolet light treatment, which kills any remaining bacteria and viruses.

The Credite process is being used in a number of places, including on the ocean floor. The process has been shown to be effective in removing impurities from water, and it is believed to be the cleanest method of water treatment available.
A New Experience in Motoring Pleasure
Brilliant, fresh and sparkling as a summer stream

- REMOTE PASSENGER CONTROL: Martin-Keeler ejector seats are fitted to ensure comfort throughout the passenger compartment. Whenever a passenger is objective, they can be-glazed from the car in a height of two hundred feet. Ideal for April in the city.
- PICTURE WINDOW: Master sleeping convolution. At the touch of a button the seat begins to slide slowly to form a sleeping compartment. Alternatively, the seat is designed to swivel into a set music.
- AUTOMATIC HAZARD ELIMINATOR: No more unnecessary waiting behind other cars. No more waiting in traffic jams. No more time-wasting delays in traffic jams. At the touch of a button all 400 miles per hour are instantly reduced, and the built-in record player swivels into a set music.
- NEW 100 WATT HI-FIDELITY INVERTOMATIC BLOOMETER: A flick of the dash mounted lever instantly turns the dash into a lady's dashboard. All controls, including the switches for handling out other cars, are easily accessible behind the dashboard. No more sharpening for those who do not want to be bothered. The dashboard displays a timer of 30 minutes for every 10 seconds, enabling you to set the time for any occasion.
- POWER FOG FREIGHT TRANSMISSION: Does the thinking for you. Takes the worry out of driving. No stopping. No gear changing. No clutching. The Power Fog Transmission drops into intermediate hold and open the throttle wide when any car starts to pass your Auto da Fe.

The Auto da Fe is available in four brilliantly original models. The 250 horsepower Golden Rocket Status Seeker, the 200 horsepower Emerald Cruise, the 100 horsepower Pico Ultra Locomotive and the 50 horsepower Pico Ultra Locomotive. The Packard Packard Westerly fitted with peels.

THE LOVER
SYLPHLIKE she glanced past and scented the puce petals to a further odour; she poured herself and her own scent in the rain to create the half somber air of magic, of mystery. Her journey was... odyssey... symbolic for the lover seeking the changeless.

The lover saw her as she laughed, delicious, calling at the lover's gift which contained no evil and would bring her life... her love.

Then softly, slowly she struggled, thrashing; and would die. But the dream was sent and she turned away, realizing: "Strange are the ways," was his theme; remembering the gifts bestowed and gone — flying in state, languidly tending. In the end, they were always... always. And when she could not love her, she loved the tenkuro which sheltered her... her love.

Always... they were given love,
But for the loved she turned away.
She cherished the jewels, golden, the gold painting.
There was a heart... bearen gold... which she cherished.
It was a bucket (it held a heart).
It was this, he recalled, which she had worn...
"Why..." he thought, and perhaps she had known, but unheeding she loved. Certainly she could not love. Instead, her life was his love. His love.

WAS it rain on his flashing body which chill'd him... (long ago)? Mercedes, hand, hand, hand...
So he stood, as variously the gifts passed by, carried along in a valley of life (L to D).
And she there, bowed under... crying... the tears. "By... why do you cry?" (for he could not comprehend).
But she only looked at him, and so he turned away, thinking of gifts not yet... turned, still embalmed in lovely life.

BOB THOMPSON

Thurnika is the journal of the University of New South Wales Students' Union. It is printed by John Fairfax and Sons Pty Ltd, for the publishers Mr D.J. Roache, Director of Student Publications, University of New South Wales Students' Union. Edited by Liz Devlin.
