N:URAEV

Mr.L.Lardner, Manager, Property and Works, felt that the work of his Department could be aided by the drawing together of material relating to the development of the University's buildings and grounds, particularly in respect of those facilities on the Kensington campus. Mr. Lardner saw the material not only as a reference tool but as a means of people understanding a little about the way in which the buildings and grounds have been developed in a comparatively short period of time. This document is an initial attempt to provide such material.

As a University is a community of people, whose well being and quality of work can be influenced, at any given time, by a variety of factors, among which is the environment in which they work and study, any document that traces the development of the buildings and grounds that helped to create that environment will, by necessity, include some of the basic elements of an historical study. However, such a document should not be seen as a "history" because it does not contain all of the necessary elements. This is such a document.

There are gaps in the data. This is because the records could not be found or the time needed to trace the material could not be justified in the context of this project.

The material in this document has been verified, wherever possible, from original sources. These sources were found in the University Archives, Library, Property and Works Department and Planning Services Office, University publications, the State Archives, the Australian Archives, the Department of Public Works' Plan Room and the Mitchell Library. Helpful advice was obtained from Ms N. Siminsky and Mr. K. Matthews of the Property and Works staff and several members of the Randwick Historical Society and the Bowen Library of Randwick City Council were consulted. Unfortunately most Randwick City Council records were destroyed by fire in 1955.

Considerable assistance and guidance was received from Mr. L. Dillon, the University Archivist, and his staff and various staff in the Property and Works Department to whom thanks is given.

An appropriate bibliography is included.

1 INTRODUCTION

The issues relating to the role of technical education and a perceived need for higher technical education had been before politicians and educators for many years before the institution that was subsequently to be called the University of New South Wales came into being. Mr. Justice W.C.Windeyer raised the matter in 1879 and the rather acrimonious public debate between Mr. Norman Selfe and his Minister, the Hon. James Inglis, on the subject, in the late 1880's, is well documented. There were subsequent calls for a greater recognition of the place of higher technical education in the education provisions in N.S.W.

In 1915 technological training at the professional level, which demanded matriculation level entry, was begun at Sydney Technical College. Students were expected to work during the day and attend classes in the evening.

In 1940 many supporters of higher technological education saw the Technical Education Act, of that year, as furthering the recognition of that area of education, but a change in Government, which did not support the way in which the act dealt with the issue, saw the Act "nullified". The Second World War saw such issues put on hold.

The war created a social, scientific and technological revolution and the lessons that had been learned from it and the needs of a society, radically different to that experienced prior to the war, had to be assessed, and where appropriate, plans developed and action taken. However, funds and other resources were in short supply so priorities had to be established by all levels of government. Because the number of demands far exceeded the resources available to it the N.S.W Government determined that some projects would need to be undertaken over a longer period than would be preferred under "normal" circumstances. The establishment of a new higher education institution fell into this category, even though the Government gave the project a very high priority.

The Hon. R.J.Heffron, the Minister for Education, stated his intention to establish an "institute of technology", when speaking to the Estimates and Appropriation Bill, in State Parliament, on the 6 November, 1945. It is suggested that Wallace C.Wurth, the Chairman of the N.S.W.Public Service Board, who had been the Director-General of Manpower during the war, might have urged the Minister to make such a provision for the training of technologists for industry because it was seen that a gap existed between the engineer/scientist and the engineer/manager and that there was a need for research to be undertaken into the day to day problems of industry. Wurth was to play a significant role in the early life of the new institution.

The Premier, the Hon. W.J.McKell, strongly supported the establishment of the new institution and favoured a site in Kensington as evidenced by the fact that he had asked the Government Architect to prepare a feasibility study of the site. The site plan, showing three schemes, was prepared by the 27 May, 1946. The plan included some favourable comparisons between the proposed institution and MIT & Michigan State University (see the early Council records in the University Archives). The Public Buildings Advisory

Committee also reported favourably on the site but Willis on page 31 suggests that " the Advisory Committee's concept of the site requirement of the new institute was clearly far removed from that of the usual Australian university. It seems that in those early days the Committee had a vision of a series of buildings of the usual technical-college type on sites having limited recreational areas."

The Premier offered the land, amounting to 7.3 hectares, and located on a disused racecourse in Kensington, to Heffron, as a site for the proposed institute of technology.

Cabinet gave its approval, in principle, to the new institution on the 9 July, 1946.

A Developmental Council was established, primarily to develop the necessary legislation to create the new institution. Initially, as evidenced by his address to the first meeting of the Development Council on the 27 August, 1947, Heffron saw the new institution as being an integral part of the state's technical education system and carrying out works complementary to those already being carried out by the Technical Education Branch and and in the technical faculties of the University of Sydney. In identifying the problem facing the new institution Heffron defined a "technologist" as "one with a thorough training in one or more of the sciences, skilled in applying the principles of those sciences to some human endeavour" and a "pure scientist" as "being concerned with the mastering of his science as a logical system of knowledge and to extend its boundaries". Heffron accepted that the two are so inter-related that it is difficult to draw a clear line of demarcation and that they must work in close collaboration. However he saw that if "we are to reap the full advantage of the work of the pure scientists, five or ten times their number must devote their energies to the application of scientific discoveries in the various fields of human endeavour"

It is in this context that the functions of the new institution were set down as:

- (a) the provision of a steady supply of trained technologists:
- (b) obtaining the fullest application of scientific discourses to industrial processes resulting in the initiation of new branches of technology and the increase in efficiency of manufacturing processes:
- (c) the application of scientific methods to problems of management and organisation in industry: and
- (d) the provision of opportunities for any worker with ability, whatever his economic circumstances, to acquire the highest scientific training.

Heffron acknowledged that the most important element in successfully undertaking these functions was to enlist the services of first-class men and he supported the view that "Universities which put their money into men before buildings are bound to succeed". However a little later in his address to the Developmental Council, when reiterating his strong commitment to the institution being part of the technical education system, Heffron indicated that technical education staff, supplemented by some new specialists, could carry out research provided time, equipment and encouragement are forthcoming.

Subsequent actions in respect of the early appointment of staff and the level of academic salaries would seem to support the latter view, rather than the earlier and more lofty statements.

In talking about buildings, Heffron reaffirmed his view of the place of the new institution when he indicated that one of the Developmental Council's first tasks was to work out an interim arrangement to share technical education facilities and to remain in touch with other phases of technical instruction. Heffron finished his remarks by indicating that the funds for the institution would be part of a complete technical education grant and that the institution would grow up to complete the system partially developed in the Technical Education Branch and in the technical faculties of the University of Sydney.

This concept of the new institution was to have an impact on its development for some years.

The first students began courses in 1948, at Ultimo, in an institution initially called the New South Wales Institute of Technology. By September, 1948, the title the New South Wales Technical University was preferred, only to be replaced in early 1949 with a third title, the New South Wales University of Technology. The legislation which finally established the University, with this title, came into effect on 1 July, 1949.

As mentioned earlier the New South Wales Government had given the establishment of the new institution a very high priority but it was known, even so, that funds and building materials would be limited. However, there were times when insufficient funds and/or materials were available to enable even approved projects to proceed. In 1951, for example, the University sought the Government's approval to import steel to avoid delays on projects at Ultimo. It also felt the need to seek approval to import 1000 tons of steel to be held for future use (resolution 135). Industrial action was also rife in the 1950's and this contributed to delays in the completion of some projects.

The shortage of funds extended to staff, equipment and general costs (eg stationery, printing etc) and it was for this reason that, for some years, the facilities, including staff, of the Technical Education Branch of the N.S.W. Teaching Service, were used to service the new institution.

Initially the new institution was without buildings also and had to rely upon accommodation provided by the Technical Education Branch at Ultimo. It was accepted that the new institution could not begin its teaching program without the facilities provided by the Technical Education Branch but the costs to the new institution were considerable and the long term effect was that the Technical Education Branch benefited greatly from the new and refurbishment building program, undertaken at Ultimo, on behalf of the new institution. Furthermore, although the relationship between the new institution and the Technical Education Branch appears to have been very cordial, it is difficult to imagine that the Branch did not suffer considerably through the demands of the new institution and vice-versa. It is suggested also that loyalties would have been placed under strain with staff expected to serve two masters and there would have been times when short resources were allocated in such a way as to create tension and jealousy within one or both units.

There were a number of "players" involved in the institution's establishment and development. Those concerned with its establishment and those who were charged with the responsibility for its development were very competent and highly regarded in their own fields. They were also very committed to the institution and its objectives. However, it could be said also that most lacked knowledge and expertise in the particular and special needs of a new tertiary academic institution and, particularly, in the needs of this new form of institution. Such a statement is made in the knowledge that some would have been involved in the development, design, administration and teaching of diploma courses at the Technical College.

Criticism could also be directed at the "public service" domination of the infant institution. Professor J.P.Baxter, the University's first Vice-Chancellor, saw the advantages of the "public service" involvement outweighing the disadvantages. However there were those staff who saw the new institution's reputation and consequently its future, being dependent upon it gaining its "autonomy", particularly in the selection of academic staff, but Baxter was to criticise those staff for their "immaturity" in seeking autonomy "at all costs".

The situation is perhaps difficult to imagine at a distance of over forty years. There are now 37 Universities in Australia and, in the main, they are very large institutions. The binary system of higher education has "been and gone", the N.S.W.Public Service Board no longer exists and, although one might complain about shortages of funds, Universities are now wealthy institutions, by comparison. Many people would not realise that, at the time the University of New South Wales was established, it was only the eighth university to be established in Australia (the seventh University was A.N.U. which was established in 1946. However it was a research and post-graduate institution only, at that time). Consequently there were few Australians available who had had previous university administrative experience and even less who had any university "planning" experience, particularly relating to technology.

It may be difficult for those accustomed to working in a large university bureaucracy to imagine a time when there were not the funds to meet the costs, even if experienced staff had been available, of providing a support service that "belonged" to the institution. The new institution, however, could not afford its "own" support staff and for a number of years it relied on the Technical Education Branch for all of its support services. In fact, it was not until 1957 that the last of the administrative activities were transferred to the University (ie.Examinations and Student Records), albeit with some strings still attached (see file 57/U64/5374).

Unless one has experienced the "stifling" effects of the N.S.W. Public Service Board, with the autocratic rule of its Chairman and the inflexibility of many of its Inspectors, one could not imagine the difficulties that must have been experienced by any early staff who joined the new institution expecting to find a "University" environment. Of course the bulk of the original staff were accustomed to the domination of the Board, and the constant delays and interference, but their acceptance of the situation would have been, no doubt, very frustrating to their "outsider" colleagues who had "university" expectations. Another possible frustration initially might have been the fact that the new institution was not seen as one that was to be totally separate from the technical education system. The

continued involvement of Mr. Arthur Denning until 1952 would have reinforced this situation (from 1949 to 1952 Denning was both the Director of the University and Deputy Director/Director of Technical Education) as would the continued use of the title "Director" which was not replaced by "Vice-Chancellor" until 1955.

In summary, therefore, it is submitted that there was a lack of experienced University administrators among the early staff of the institution and, although they were committed and enthusiastic, collectively the early planners and, particularly those with the "power", lacked an appreciation of the needs of a "university" type of institution. Some staff who were appointed subsequently from outside of the public service, and in particular some academic staff who probably assumed that they were joining an institution with university characteristics, found much of the "public service" type control irksome and inappropriate (eg as late as 1956 Professor Hartwell resigned over the Public Service Board's involvement in the selection of staff). These factors, coupled with the lack of finance, the post-war scarcities of building materials and equipment and industrial issues, had a major impact on the early buildings and grounds activities of the institution. These factors need to be recognised and kept in mind because they had their impact on the design, type and quality of the early buildings still in use today.

2 THE USE OF FACILITIES AT ULTIMO

Pending the erection of its own buildings and the acquisition of equipment, arrangements were made for the new institution to have, at its disposal, the resources of the Technical Education Branch (and after 1949, the Department of Technical Education), including staff, lecture rooms/laboratories, offices, drawing offices and student facilities. Five light-framed prefabricated buildings were erected at Ultimo for use as a Library(2) and staff(1) and student(2) amenities. Several existing buildings were refurbished and other nearby buildings were acquired and converted for University use (eg. two large buildings were reconstructed for Civil Engineering). This need to provide facilities at Ultimo was a continuing drain on the University's resources but was inevitable, in the circumstances. The Sydney Technical College benefited, in the long run, from these resources, some of which are still in use today. Of course the provision of the facilities, their placement and the finding of the necessary support services was made much easier by Mr.A.Denning's joint appointment as Acting Director of the new institution and Deputy Superintendent of the Technical Education Branch..

When the Developmental Council met on 27 August, 1947, it established a Building and Grounds Committee. Its function, like the Developmental Council's, was to develop policy, not to be involved in the day to day management of the new institution. At this stage that role was filled by staff of the Technical Education Branch. All building alterations and repairs and design and associated services were provided by the Department of Public Works. In a period of both human and building materials shortages and industrial unrest this, when linked to the cumbersome way in which both departments operated at that time, would have led, it is believed, to many frustrations being endured.

Equipment also was centrally controlled and any new equipment, which now would be made up within a teaching department, had to be made in the central workshops of the Technical Education Branch, away from the University schools where it was needed. This led to many problems because of the competition for resources and led Professor Harold Brown to set up a model shop in 1949 to make research equipment (Willis p 37). The model shop was later disbanded and its staff and equipment distributed among the schools.

It is difficult to determine the total cost of all work undertaken at Ultimo, on behalf of the new institution, but an estimate would not fall far short of 1,000,000 pounds.

Most administrative functions were transferred from Ultimo to Kensington in 1952 but it was to be over a decade later before the last teaching function was to leave the area.

3 THE KENSINGTON SITE

(i) The Developmental Council and its work associated with the site.

The Developmental Council for the new institution, known at that time as "the Institute of Technology" was established on the 8 July, 1947, and it held its first meeting on the 27 August, 1947. The Hon. R.J.Heffron, Minister for Education, assumed the chair and remained its active Chairman until its last meeting on the 26 May, 1949.

Only two members were drawn from the University sector, Professor S.H.Roberts, Vice-Chancellor, and Professor R.J.LeFevre, Professor of Chemistry, both from the University of Sydney (LeFevre was to resign from the Developmental Council in September, 1948, because, among other things, he disagreed with the use of the title "University" in the proposed name of the new institution). Their academic qualifications cannot be faulted and Roberts was an experienced tertiary educational administrator. However, if they had any claim to expertise in the building and accommodation aspects of a new tertiary institution this expertise was not recognised in the appointment of members to the Building and Grounds Committee of the Developmental Council. That Committee had only "lay" members and members drawn from the Public Service Board and the N.S.W. Department of Education and its Technical Education Branch. The absence of "knowledgeable" members from this and the First Council's Building and Equipment Committee was to see the plans for the first "University" building changed many times to meet the needs of the staff of the new institution, as they were appointed and were able to contribute to its layout. To the members credit they did support changes even though it meant the use of short resources and caused further delays.

The members of the Building and Grounds Committee were Messrs W.Clegg, (General Manager, Commonwealth Steel), as Chairman, A. Denning and H.J.Brown, (who were to be Acting Director and Acting Deputy Director respectively of the new Institute), W.G.Kett, (a Director of Mark Foys), R.Parry-Okeden, (Managing Director, Lysaghts Works), P.D.Riddell, (Superintendent, Technical Education Branch), F.Wilson, (a Director of Howie Moffatt) and W.C.Wurth, (Chairman, Public Service Board). Its tasks were to:

- (a) recommend a suitable site:
- (b) advise on the nature and layout of buildings and grounds:
- (c) advise on the equipment required for buildings:
- (d) in each of the above, give consideration to both long range plans and proposals for the immediate future and
- (e) advise on the use of Technical Colleges in the interim period.

The Building and Grounds Committee, as one of its first tasks, considered the question of the site for the institution and decided that the Kensington site, because it contained only 7.3 hectares, was inadequate. The Developmental Council authorised its Building and Grounds Committee to investigate a site in Darlington (which, incidently, is now part of the University of Sydney).

The site at Darlington contained 750 houses as well as public and private buildings (eg.

the Deaf, Dumb and Blind Institute, a public school, a post office, the Darlington Town Hall and a number of factories etc.) and involved resumptions over a lengthy period.

Mr. A. Denning, the then Deputy Superintendent of Technical Education, who also was to hold, in addition to his position in the Technical Education Branch, the position of Acting Director and then Director of the new institution, prepared a report for the Developmental Council in 1948 (see University Archives) which showed that the acquisition of Darlington would cost at least 1 million pounds, plus any costs associated with public buildings, for a gain of 29.5 hectares. He compared this to the Kensington site which was available immediately and would cost nothing to acquire. He also identified other land, either adjacent to or near the available 7.3 hectares, that might be available in the foreseeable future (two of the parcels of land identified by Denning were those set aside for Sydney Hospital (17 hectares) and the Department of Railways (1.2 hectares). Denning saw the potential of Kensington as greater than Darlington, particularly because of the proposed Eastern Suburbs Railway. He compared the "pollution at Darlington to the fog, in Winter and Spring, at Kensington" and in the light of all of the evidence he argued that the Kensington site should be accepted. However, the Cumberland County Council recommended the Darlington site to the Developmental Council. Even though site plans for both Kensington and Darlington were prepared by the Cumberland County Council (see site plans Br 2778 & 2779 - Cumberland C.C.- 15 March, 1948) the County Council made it clear to the Developmental Council that it favoured the Darlington site.

On the 20 May, 1948, the Developmental Council decided to proceed with the Darlington site as the permanent home of the institute, with the aim of acquiring 4 hectares by the end of 1952. It also decided to use the Kensington site, as a temporary base only, with any buildings being of general purpose design which could be used for technical education purposes if later relinquished by the institute.

(ii) Councils' work associated with the site.

The cost and uncertainties associated with the Darlington site continued to worry some members of the Developmental Council. When the first Council of the New South Wales University of Technology met on the 6 July, 1949, the issue was raised and in the light of a report, which showed that Darlington would cost between 1 and 2 million pounds and up to 25 years to acquire, the Council decided, on the 20 October, 1949, to proceed with the Kensington site (see appendix A(i)). This settled the site issue.

The amount of land available at Kensington, however, remained an issue. At its meeting on the 10 July, 1950, Council expressed concern that "it is not possible to obtain a spacious and dignified layout on the area at present available".

On the 16 June, 1952, the Council received advice of the Cabinet's decision to vest, in the University, 24.5 hectares of land at Kensington consisting of the original 7.3 hectares together with the 17 hectares formerly set aside for Sydney Hospital (see appendix A(ii)). The 1.2 hectares set aside for Railway purposes were not included at this time. The land was actually transferred on the 3 December, 1952.

The railway land of 1.2 hectares was transferred on the 18 June, 1954, and another 1.2 hectares, on the western side of Anzac Parade, was added to the University's holdings on 23 June, 1954 (a sketch plan of the site at this time is available in the University Archives). The site of the University was then bounded by High Street, Anzac Parade and Barker and Willis Streets (the Lower and Central campuses) plus an area on the western side of Anzac Parade (see appendix A(iii)).

Upper Campus was acquired in November, 1959, by resumption from the Randwick Council (see appendix A(iii)). The area contained a Golf Course and an Oval, an area of 10.1 hectares. It is of interest to note that the acquisition was supported, at that time, by the local residents. However, before proceeding with the acquisition, which was to provide a site primarily for the new Medical School, the University Council gave serious consideration to locating the new Medical School on the Prince Henry Hospital site. The distance involved was the major factor that influenced the decision in favour of the Upper Campus acquisition.

The clubhouse of the former Golf Club, located on the corner of Botany and High Streets was acquired on the 13 March, 1963, and Unisearch House, at 221/227 Anzac Parade, was purchased in 1966 (see appendix A(iii)).

Other sites have been acquired nearby since 1966 (eg various houses in Botany Street) but these are not shown in the published "Campus Plan". Consequently it can be said that the above acquisitions completed the Kensington site as it still exists in 1992.

(iii) The original site at Kensington.

The original site of 7.3 hectares at Kensington was Crown land. From the 3 January, 1890, it was leased to a Mr G.B.Rowley, for recreation purposes. It was used as a pony racecourse, with the first pony race meeting being held in June, 1893. The area continued to be used for pony races until April, 1942.

The racecourse was used in 1899/1900 to house the South African War contingent, troops left for Gallipoli from the site in W.W.1 and it was used again during W.W.2 as a military camp (there is a commemorative plaque to be found at the Anzac Parade gates). A migrant hostel was located there in 1948.

The Old Tote Precinct of the University was the original courtyard and saddling paddock of the racecourse. There was a grandstand in the Paddock, which catered for 1000 people, and another in the St.Leger for 500 people. There were a number of buildings used as stables also on the site. Photographs in the University Archives show the Racecourse at different times, eg one shows the area on 13 May, 1943, and the racecourse, its buildings and the Randwick Oval area can be seen.

The ground was sandy, there were very few trees and there were drainage problems. There was a pond, where the Village Green is located now, that was created and fed by stormwater (a photograph can be seen on p.4 of the 19/2/82 issue of Uniken).

Many of the buildings were demolished before the new institution gained access to the site. However, a number of buildings still remained and some are still in use.

The Totalisator Building, now known as the Old Tote Building (B15) and the Jockeys Changerooms and Weighing Area, now known as the Whitehouse (Building C15), are still in use by the University. The "Recreation Hall", used by the Migrant Hostel, is now the "Figtree Theatre" and Buildings B14a,b,c, and e, which are still in use, were part of the Migrant Hostel. Several Moreton Bay fig trees, which date back to the 19th century, still stand also. There is an excellent set of photographs, which show these buildings, held at the Mitchell Library (on behalf of the former Government Printing Office - No.32606) and one such photograph can be seen on page 207 of Willis' book.

The base of the "St.Leger" Grandstand was used as the first Maintenance Workshop of the University, having previously been used by the Army for "meals" and as a kitchen area for both the Migrant Hostel and the University Student Hostel. It was demolished to make way for the present Workshop and Store. Two other hostel buildings were relocated and served as part of the "Hut" complex until recently (E15C & D).

There were other buildings on the site at the time of its acquisition, which were subsequently removed - the first Caretaker/Watchman employed by the University, Harry Reed, occupied a house in 1957 that had been part of the hostel development(it was demolished to make way for Baxter College), a weatherboard cottage was located on High Street, on the N.E. part of site, with a permissive occupancy which expired on 31 December,1952. The building was offered to the occupier, provided he removed it at his own expense. There was another small cottage on Anzac Parade, on the S.W. part of site,

and there were stables on the N.E. part of site adjoining Randwick Park. Both were covered by permissive occupancies which expired on the 31 October, 1953, and not renewed. There were also 3 tennis courts in the S.W. corner of the site, for which permissive occupancy was not renewed when it expired on 31 December, 1952. The only "original" buildings still standing, therefore, are those in the "Old Tote" precinct and several buildings on the Western campus, adjacent to NIDA.

4 THE DEVELOPMENTAL COUNCIL, THE FIRST COUNCIL AND SOME SENIOR OFFICERS OF THE UNIVERSITY FROM 1947 TO 1993

(1) The Developmental Council

established	8 July, 1947	
first meeting	27 August, 1947	
Chairman	The Hon. R.J. Heffron	
Deputy Chairman	W.C. Wurth	
Acting Director	A. Denning	appointed at Developmental Council meeting on 12 February, 1948
Acting Assistant Director	H.J. Brown	appointed 1 March, 1948
Secretary to Developmental Council	J.S. Fraser	appointed 2 October, 1947

(2) - The Council

With the enactment of The Technical Education and New South Wales University of Technology Act, 1949, the work of the Developmental Council was finished. The Act provided for the establishment of the University. The first Council was appointed on the 5 July, 1949. The Council held its first meeting on 6 July, 1949.

The titles of President and Vice President of Council and Director and Deputy Director of the University were used until the Amendment Act of March, 1955, after which the titles of Chancellor, Deputy Chancellor, Vice-Chancellor and Pro-Vice-Chancellor were used.

President	W.C. Wurth	1949 - 1955
Vice-President	Dr. R.W. Harman	1949 - 1953

Director	A.Denning	1 July, 1949 - 31 December, 1952
	Professor J.P.Baxter	appointed first full- time Director on the 1 January, 1953 - 1955
Acting Deputy Director	Professor J.P.Baxter	4 February - 31 December, 1952

Business Manager (Property)	Robert K.Fletcher	1970 - 1980
--------------------------------	-------------------	-------------

5 PROPERTY FUNCTIONS AND THE SENIOR OFFICERS INVOLVED

Prior to the "appointed day" of 1 July, 1954, the Developmental Council and subsequent University Councils determined the facility development policy for the University but the actual administrative services were provided by the Department of Technical Education (and before 1949 by the Technical Education Branch). No records are readily available covering these activities.

After the "appointed day" the University's administrative organisation chart shows the Bursar responsible for "sites and buildings", although some functions still remained with the Department for a further period eg. maintenance of buildings and equipment. An Assistant Bursar, Buildings & Grounds, (Mr.R.G.Sutton), was appointed on the 25 January, 1955. Mr.Sutton was replaced by Mr.L.V.O'Neill on the 16 September, 1957. A Building, Planning and Development Section was established from the 1 September, 1958, and the former Government Architect, Mr.Cobden Parkes, was appointed as its O.I.C. Mr.Cobden Parkes remained in the position until 1966. An Architect, Mr.J.W.Van der Steen, was appointed to the Section on the 22 September, 1961, (he subsequently became University Architect), and Mr.R.K.Fletcher was appointed as the section's Executive Assistant on the 29 September, 1961. Together with the University Engineer, Mr.R.Tingle, these officers, and others appointed subsequently, were responsible for much of the architectural and engineering work that took place in the 1960's and 1970's. Most of the projects completed on the Upper Campus during this time were designed either by or under the direction of University staff. One very good example of their work is the Chancellery, which was designed and the construction supervised by University staff.

In 1970 the Property activities were separated from the Bursar's Division, a position of Business Manager(Property) was established and Mr.Fletcher was appointed. He was assisted by an Associate Business Manager, Mr.J.Moore, and from 1975 there also was a Deputy Business Manager, Mr.I.Way. Messrs Fletcher and Moore retired in 1980.

At this time Mr.Way was appointed to the position of Registrar and the "Properties" area went through another change by being transferred to the Registrar's Division. Mr. P.Koller was appointed as Head of the Department. He was succeeded by Mr. L.Lardner in 1991.

The properties activities have gone through many management changes since the functions were assumed by the University administration in 1952. In 1954 the Bursar was responsible for "Sites & Buildings", in 1965 that had been changed to "Building Planning & Development, Buildings & Grounds and Property", in 1970 the Property area became a Division in its own right, in 1980 responsibility was transferred to the Registrar and the current situation sees the Department answering to both the Registrar and a Deputy Vice-Chancellor, depending upon the activity.

The responsibilities of the area have grown considerably since its inception forty years ago. Planning and project management, Fiscal, Safety, Insurance, Cleaning, Space Management and Parking/Security activities are now part of the mainstream of its activities.

A short statement on the current Property and Works Department's structure and establishment is set out in appendix B.

6 ESTABLISHMENT OF FACULTIES

Students were first admitted in 1948. The degrees open to them were in Civil, Electrical, Mechanical and Coal Mining Engineering, with instruction in the Humanities and the requirement of a specified period of practical training in industry seen as integral parts of each course.

Applied Chemistry and Chemical Engineering and a post-graduate program in Electronic Engineering were added in March, 1949.

The first faculties were established on 8 May, 1950. These were the Faculties of Architecture, Engineering and Applied Science.

The University was granted its autonomy, as an employer, on the 1 July, 1954. Until that date all staff were employed in terms of the Public Service Act.

The Faculty of Humanities & Social Sciences was established on the 12 July, 1954, and it was comprised of the School of Humanities and Social Sciences and the Department of Arts at Newcastle. In 1957 the School of Applied Psychology was added to the faculty. It was transferred from the Faculty of Science.

The Faculties of Technology and Commerce were established by Council on the 1 June, 1956. As a consequence of the establishment of the Faculty of Technology the Faculty of Applied Science was renamed the Faculty of Science.

Consequently in 1957 there were six Faculties:

- Science
- Engineering
- Technology
- Architecture
- Humanities & Social Science
- Commerce

These were made up of 18 schools including the Department of Arts at the Newcastle University College

The Faculty of Arts replaced the Faculty of Humanities and Social Science, with the first students being enrolled in Arts in February, 1960 (49 students).

The Faculty of Medicine enrolled its first students (76) in 1961.

In 1961 the Faculty of Technology became the Faculty of Applied Science.

The Faculty of Biological Sciences was established in 1968.

The Faculty of Military Studies was established in 1968. It was subsumed subsequently into the University College within The Australian Defence Force Academy.

The Faculty of Law enrolled its first students in 1971 (219 students).

The Faculty of Professional Studies was established on the 20 January, 1975.

It should be recognised that there have been other faculty name changes over the years eg the Faculty of Arts is now the Faculty of Arts and Social Sciences, that teaching did not necessarily begin with the establishment of a faculty eg. a Board of Vocational Studies preceded the Faculty of Professional Studies and that teaching has been and is conducted by units outside the faculty structure eg. the Australian Graduate School of Management. The University College within The Australian Defence Force Academy has its own departmental structure. If further details are required it is suggested that University Annual Reports and Calendars be consulted.

7 STUDENT RESIDENCES

The need for student accommodation was first identified in 1948, particularly for country students. However, the problems associated with the choice of a site, together with financial and materials shortages, meant that nothing could be done immediately, although student accommodation remained on the Council's agenda (eg see Council papers of 16/2/50).

A student hostel was established in February, 1953, in the buildings of a former migrant hostel on High Street, and by June there were 80 students in residence, of which 60 were from South-East Asian countries, many of whom were Colombo Plan students. A further group of buildings on Anzac Parade, Buildings E1a,b,c, and others subsequently demolished to make way for N.I.D.A., was made available in June, 1953, and these increased the accommodation to 300 places (see the University's 1953 Annual Report). 200 students were in the wooden huts on Anzac Parade, with the balance in the facilities on High Street. Meals were provided in a dining room on High Street until a cafeteria was provided in the Main Building of the University.

The first Warden, Mr G H Aylward, was appointed in August, 1953.

In August, 1957, a tender was let for the first residential college; work had actually started in July. A lack of funds had delayed a start on a permanent, purpose built student residence but a start was made possible by a donation of \$80,000 by Dr. A. Basser, after whom the college was named. The College took two years to build. It was opened on the 1 July, 1959, by Field Marshall Sir William Slim, the Governor-General. There were 192 students in residence. The total cost was \$570,000.

The completion of the residence released the old accommodation for other purposes.

On the 24 April, 1959, Kensington Colleges Ltd was incorporated to operate Basser College and Dr. M. Mackay was appointed Master.

Goldstein College, named after its benefactor, was officially opened by the Premier, the Hon. J. B. Renshaw, on the 30 June, 1964.

Philip Baxter College was officially opened by Senator J. Gorton, Minister in Charge of Commonwealth Activities in Education and Research, on the 14 October, 1966.

Stage 1 of International House, catering for 121 post-graduate students, was officially opened on the 14 June, 1968, by Sir Roden Cutler, the Governor. The impetus for an International House at the University of N.S.W. and the University of Sydney came from Rotary International. The total cost was \$600,000, of which \$200,000 was raised by Rotary. International House Ltd was set up to manage the house.

In 1967 Council decided to grant long leases to certain religious foundations to allow for the provision of further residential accommodation. Three Colleges were constructed as an outcome of this decision.

An Anglican College, New College, catering for 210 students, was officially opened by the Governor-General, His Excellency, the Right Honourable Sir Paul Hasluck, on the 12 October, 1969.

Warrane College, a Catholic College, was officially opened by the Governor of N.S.W., Sir Roden Cutler, on the 13 June, 1971.

Shalom College, a Jewish College, was officially opened by the Governor of N.S.W., Sir Roden Cutler, on the 29 March, 1973.

8 STUDENT NUMBERS

1971	17425		

9 STAFF NUMBERS

510 staff joined the new institution on the "appointed day" of the 1 July, 1954.

Staff figures for every subsequent year are not readily available. The figures available are:

1961	1152
1962	1422

1964	1417
1965	1562

1972	2875
1973	3118

1978	4108
1979	4016
1980	4070
1981	4098
1982	3940
1983	3879
1984	3760
1985	3840
1986	3906
1987	3965
1988	3743
1988	3766
1989	3766
1990	4174
1991	4501
1992	4551

all figures from 1978 are in FTE - previous figures are assumed to be headcount figures

10 FUNDING/EXPENDITURE

Initially funds for buildings etc were provided by the State Government and by 1958 the annual amount for buildings and grounds had stabilised at about 500,000 pounds per annum.

In 1956 the then Prime Minister, Sir Robert Menzies, invited the Chairman of the Universities Grants Committee in Great Britain, Sir Keith Murray, to head a committee of enquiry into Australian Universities. The subsequent report, known as the Murray Report, (1957), influenced the Commonwealth to enter more strongly into the funding of university building and equipment programs and to become more interested in other areas of their development. In respect of the NSW University of Technology, direct outcomes included a change of objectives to make it a more traditional type of university able to offer degrees in medicine, arts and other disciplines in addition to its technological base. Largely to reflect this broadening of its offerings its name was changed to the University of New South Wales, effective from October, 1958.

Another outcome of the Murray Report, saw the Commonwealth Government accept some financial responsibility for buildings and grounds. Initially the Commonwealth contributed 300,000 pounds per annum to the University of NSW, in addition to the State's contribution. Triennial funding was then introduced and ultimately the Commonwealth accepted the total responsibility for the funding of approved projects. These arrangements involved the need to identify projects well in advance and funds were provided for specific projects only and at a level determined by the Commonwealth.

The outcomes of the Murray Report changed the face of the University. In the decade following its release the University experienced a building boom with numerous buildings being funded under the new arrangements. The University could not have grown so quickly without that injection of Commonwealth funding.

A new funding arrangement will come into effect as from 1994 with the introduction of a "rolling" system of funding for "property" activities. This will give the University the ability to determine its own priority and levels of finish and fittings for future buildings.

Actual expenditure figures are not readily available because of the University's accounting procedures. The following figures have been extracted from several sources (mainly Annual Reports). The actual figure quoted for each year would probably be more. However, it certainly would not be less:

total expenditure for period 7/1949 to 6/1956 - 6,595,432 pounds

1955/56 1.3M pounds

1956/57 1.2M pounds

1961	3,077,227 pounds	1981	\$1,073,955
1962	2,663,831 pounds	1982	\$479,638
1963	1,339,008 pounds	1983	\$761,918
1964	\$1,889,626	1984	\$594,000
1965	\$5,102,128	1985	\$621,000
1966	\$2,275,794	1986	\$668,000
1967	\$2,060,993	1987	\$705,000
1968	\$3,880,638	1988	\$8,801,246 *
1969	\$3,116,088	1989	\$7,800,976 *
1970	\$2,442,868	1990	\$9,021,770 *
1971	\$3,106,979	1991	\$9,307,768 *
1972	\$5,094,306	1992	\$5,684,248 * until 22/10/92
1973	\$4,697,335		
1974	\$4,209,511		
1975	\$6,868,107		
1976	\$4,225,750		
1977	\$3,301,641		
1978	\$1,564,979		
1979	\$3,077,916		
1980	\$4,852,965		

* does not include Faculty or Union expenditure

* this project is a joint one with the University of Sydney. When completed the facility will be leased to a company, to be run jointly by the two universities. This facility, which will cater for rats, mice and guinea pigs will complement another facility to be constructed at Camden, by the University of Sydney, for cats and dogs. This latter facility will be run also by the joint company.

13 OTHER BUILDINGS AND FACILITIES OWNED BY THE UNIVERSITY BUT NOT FORMING PART OF THE KENSINGTON CAMPUS - for details of all of the buildings on a particular site please see appendix F.

14 DETAILS OF PROPERTIES WHOSE CIRCUMSTANCES HAVE CHANGED

Property/ Building	Property Number	Details
part Manly Vale Plan DP771902, Lot 1 0.71000 hectares	DO/7A	this land was surrendered on 23 November, 1988, in exchange for the land registered as O/07B
1/2 Clara Street, Randwick	DO/35	this property was bequeathed to the University by the late C.D.Peyton on 6 March, 1988, and sold on 15 June, 1990
Lot 1, Victoria Avenue, Concord Concord Radio Transmitter	DN/5	rights to plant, buildings and transmitter mast, erected by Radio 2UE, transferred to the University on 11 January, 1973. The site was relinquished on the 18 January, 1991
Wallis Island Portion 229 130.713500 hectares	DN/6	at the request of the Department of Lands the University gave consent to its control of this reserve being revoked. This action was taken on 24 April, 1987
Duntroon Canberra	DN/14	Faculty of Military Studies established 21 July, 1967 - agreement lapsed with the establishment of ADFA - see Property Register N/24
Mudgee Observatory Site	DN/19	the permissive occupancy of this site was terminated on the 19 June, 1990, at the University's request

Brogers Creek, Nowra DP701395 - in Lot 16	DN/20	the permissive occupancy of this site was terminated on the 6 April, 1992
Lot A, corner Huntley & Euston Streets, Alexandria	DN21	permissive occupancy of this site, was granted by the Department of Main Roads on the 18 October, 1980, in order that a temporary experimental building could be constructed to measure road traffic noise in an urban area. The permissive occupancy did not proceed because of the University's loss of interest. The file was declared "dead" on the 5 February, 1991.
Old Wellington Hospital	DN/28	the permissive occupancy of all unoccupied buildings of the old hospital was revoked, at the University's request, in 1988
Flinders Street, Paddington		this property, leased on behalf of the College of Fine Arts, was relinquished after the College's new building was occupied in 1991

26 Botany Street, Randwick	O/23	purchased from the estate of the late L.A.Carey on the 10 April, 1978, for \$51,000 0.036674 hectares

Burraduc, Lakes Way, near Bungwahl	O/24 & O/24A	purchased from Myall Properties Pty Ltd on the 9 July, 1980, for \$165,000 71.970000 hectares(O/24) & 85.950000 hectares(O/24A)
32 Botany Street, Randwick	O/25	purchased from Mr. A.J.O'Mullane on the 8 December, 1980, for \$117,000 0.034145 hectares
Hay Field Station	O/26 O/26A,B,C,D,E,F	purchased from R.T.& R.H.McCormick on the 23 December, 1981, for \$102,980 129.500000 hectares(O/26) 129.500000 hectares(O/26A) 129.500000 hectares(O/26B) 129.500000 hectares(O/26C) 129.500000 hectares(O/26D) 129.500000 hectares(O/26E) & 100.700000 hectares(O/26F)
Wellington Alluvial Park, Nanima, Wellington	O/27	purchased from T.B.& P.Ker on the 9 February, 1982, for \$135,000 129.500000 hectares
47 Botany Street, Randwick Aboriginal Students' Centre	O/30	purchased from N.A.& T.Cohen on the 20 December, 1983, for \$162,500 0.046159 hectares
Fowlers Gap Field Station	O/33	originally leased as a Western Lands lease from 1 December, 1966, to 31 December, 1975, - terms of lease were changed to "in perpetuity" as from 23 March, 1972 - the University was granted title on the 16 December, 1986 38,888 hectares

30 Botany Street, Randwick	O/34	4/30 purchased on the 30 April, 1982, for \$83,000 1/30 " " " 8 September, 1982, for \$98,000 2 & 3/30 " " " 8 March, 1985, for \$135,000 0.064496 hectares
54 Barker Street, Kingsford	O/36	purchased from Mr.A.J.Kava on the 8 June, 1989, for \$230,000 0.020866 hectares
Oatley	O/37	transferred to the University from Sydney College of Advanced Education on the 1 January, 1990
22-24 Botany Street, Randwick	O/38 & O/38A	purchased at auction from the State Rail Authority On the 16 January, 1990, for \$1,800,000 0.299720 hectares
14 Arthur Street, Randwick	O/39	purchased from Mr.Riley on the 9 March, 1990, for \$260,000 0.238700 hectares
12 Arthur Street, Randwick	O/41	purchased from Mrs.A.V.Dwyer on the 20 August, 1990, for \$237,500 0.236200 hectares
1-3 Eurimbla Avenue, Randwick	O/42	purchased from the Commonwealth of Australia on the 27 November, 1991, for \$530,000 0.051730 hectares
32 High Street, Randwick	N/31	purchased by Unisearch Ltd from A.R.Robinson on the 9 September, 1987, for \$260,000 0.039014 hectares
46 High Street, Randwick	N/18	purchased by Unisearch, from Charles Hayes Facilities Pty Ltd, on the 1 July, 1974. Purchased by UNSW in 1996. 0.105431 hectares

→ Oatley Date of Practical Completion 7.12.79 67
 Opened for Students March 1986
 Official Opening May 1980

Albion Avenue, Paddington College of Fine Arts

16 LEASED SITES AND/OR BUILDINGS

King Street, Manly Vale	N/1	permissive occupancy granted to the University by the MWS&DB on the 1 July, 1959(the University first used the land on the 1 January, 1954) 1.800000 hectares
Wellington	N/8	the University is Trustee of 3 parcels of land in Reserve 85644 249.0842 hectares on 11 February, 1966 29.2343 hectares on 28 June, 1968 2.387 hectares on 26 April, 1985
	N/8B	permissive occupancy granted by the Department of Lands on the 1 October, 1966 5.362089 hectares
	N/8C	permissive occupancy granted by the Department of Lands on the 1 October, 1973 6.130000 hectares
	N/8D	deed of licence between the University and the Wellington Shire Council on the 7 June, 1985 11.580000 hectares
Smith's Lake, c/- Bunghawl	N/9	about 160 acres was proclaimed for the promotion of the study and preservation of native flora and fauna on 22 July, 1966 - the University was appointed Trustee on 9 October, 1966 - this was rescinded by the National Parks and Wildlife Act, 1974 - permissive occupancy of 2.000000 hectares granted to the University, subsequently replaced by a lease expiring on 13 October, 2006

Hay Field Station	N/11	permissive occupancy granted to the University on the 1 January, 1966 - this was superceded by the gazettal of the area as an experimental farm on the 6 July, 1973 984.600000 hectares
Hay Airport	N/15	permissive occupancy granted by the Hay Shire Council on the 1 July, 1968, for the grazing of sheep 105 hectares
Little Bay Institute of Administration	N/13	licence agreement arranged with the Prince Henry Hospital on the 4 October, 1967 1.294400 hectares
Cowan	N/16	licence agreement with the Minister for Lands dated 6 October, 1976 2.285000 hectares
Stuart Town, Wellington	N/17	the University was granted trusteeship of the area from 8 June, 1973 428.000000 hectares
Tarban Creek, Gladesville	N/23	the University is the trustee of the boatshed area(as from 5 October, 1973) and holds an annual lease for an area on the edge of Tarban Creek from the MSB 0.483000 hectares
Australian Defence Force Academy, Canberra	N/24	the Commonwealth Government provided land upon which the College of the University is located
11 Rainbow Street, Kingsford Kingsford Legal Centre	N/26	the University holds a licence agreement with the Randwick City Council dated 1 March, 1983

F.S.Faulkner Memorial Field Station c/- Hay Field Station	N/27	the University has had an agreement with the CSIRO, since 1 January, 1982, to use stipulated paddocks
270 Avoca Street, Randwick the National Drug & Alcohol Research Centre	N/29	leased from the Eastern Area Health Service 0.178900 hectares
Wyee Place, Malabar	N/30	an electricity easement leased from the NSW Land & Housing Corporation as from 8 August, 1985 which expires on the 7 August, 2010 0.001683
Siding Springs Automated Patrol Telescope	N/32	the University holds a licence agreement with the Australian National University which expires on the 1 January, 1998
23 King Street, Randwick	N/33	leased from Mr. Herbert Noethen until the 25 February, 1993, at an annual rental of 19,500
14 Francis Street, Randwick		rooms are rented in this building by the Institute of Languages
15th Floor, Plaza Building, 500 Oxford Street, Bondi Junction		an area of office and teaching space is rented in this building by the Institute of Information Technology, Unisearch

17 CHRONOLOGICAL ORDER OF CONSTRUCTION, PURCHASE OR ACQUISITION OF BUILDINGS (where appropriate Stage 1 or first building)

It should be borne in mind that, initially, the new institution had to operate on the State financial year (1 July-30 June); this was adjusted to a calendar year in 1958. Long term planning was extremely difficult, using annual budgeting, and the temptation, therefore, was to build small, often temporary, buildings which were cheap and which could be completed quickly. The new institution did erect a number of prefabricated buildings but many of these were seen, not as temporary structures, but as long term ones (this view is been borne out by the fact that these original buildings are still in use by the University). In spite of the difficulties a number of "permanent" buildings were erected under annual funding. It was not always possible to develop appropriate sketch plans for all of these buildings because of the lack of resources within the Government Architect's Branch and so plans for other buildings were sometimes adapted for the purpose (eg the Wallace Wurth/Biological Sciences Buildings). The advent of triennial funding enabled longer term plans to be developed and implemented.

Initially all teaching, research and administration were conducted at Ultimo (see section 2 for further details).

There were some buildings on the site when it was acquired (see section 3(iii) for details).

This section deals with action taken to develop the University's own buildings and grounds subsequent to its establishment:

On Site	buildings B14a,b,c,d,e, B15, C15 and E1a,b,c,d & e were on the site when acquired
1948 - 1966	initially all University activities were undertaken on the Ultimo site with a number of buildings being provided or refurbished for University use. With the gradual provision of facilities at Kensington a decreasing number of buildings were used at Ultimo with the last building being vacated in 1966 (Civil Engineering)
1953	buildings B8b,B9,10,11a,b,C10,11,D8,10,11a,E9 & the building now at the rear of the Io Myers Studio
1955	the Main Building building G2
1956	Food Science & Technology(Central) building Food Science & Technology(South) building Petroleum Engineering Centre building
1957	the Classroom Block Dalton building the Parade Theatre

(i) Main Building (K14,15) - Kensington Campus

There were a number of problems associated with the provision of any building on the Kensington site, initially. First and foremost was the uncertainty associated with the site. The Developmental Council favoured the Darlington site. This meant that there was a degree of uncertainty about what should be located at Kensington. No doubt, for this reason, it was decided to design the building for general purpose use. Perhaps, also, the members recognised that there was a lack of expertise available, at the time, to determine what an emerging institution might need and so decided to adopt a safe course of action in this instance. Such action could be well justified also in the light of the other difficulties confronting the Developmental Council such as a lack of funds and shortages of building materials, equipment and manpower. The fact that the building would be available for use by the Technical Education Branch, should the new institution be located ultimately at Darlington, may have had a bearing also on the design.

On the 24 February, 1949, the Developmental Council received sketch plans from the Government Architect, Cobden Parkes, for the first major building to be erected on the Kensington site. The siting of the building was governed by the route of the proposed "Eastern Suburbs" railway. The building could not face Anzac Parade because the railway was to run along that frontage (the land now occupied by Pooh Corner, New and Warrane Colleges, the Roundhouse, Squarehouse and Blockhouse and the Swimming Pool was to be the railway's "right of way"). However, it was desirable that the building be as near as possible to the railway so as to take advantage of any nearby railway station.

The first sod was turned on the 1 July, 1949, when several workmens' huts were erected. At the first meeting of the University's Council, held on the 6 July, 1949, it was resolved (Resolution 2) that the new building would cater for the instruction in basic subjects in the first two years of all engineering and science courses and the needs of the full course in mining engineering.

Work started in October, 1949. The first stage of the work was undertaken by the Department of Public Works, which involved the necessary excavation work and site preparation, the pouring of footings and the laying of brickwork up to first floor level. The Main Building, as it was to be known, was designed, at that stage, to contain 122,000sq.ft. of space. Many people consider that the design reflects Cobden Parkes' experience to that time - it looks like a hospital. In a more charitable statement Willis (p34) says that the "austere style reflects the shortage of materials, particularly steel, in the early 1950's". Shortages of resources were certainly real at that time.

Lt.General Sir John Northcott, Governor of New South Wales, laid the foundation stone on the 25 February, 1950, (there is a panoramic view of the site, whilst the foundation stone ceremony was in progress, to be seen in the University Archives). There is also a photograph of the building in the course of construction, as at May, 1950, to be seen on page 14 of the University's Annual Report for 1950 (also to be found in the University Archives).

On the 10 July, 1950, Council was advised that the first floor level had been reached, with 1,000,000 bricks having been laid, that working plans and specifications for the remainder of the building would be finished by the end of July and that tenders would be invited in August for the balance of the work. It was estimated that the work would take 3 years to complete.

As the land at Kensington had not been formally vested in the new institution it was necessary to enable appropriate legislation in order that construction could take place on the site. This was done in 1951, through The New South Wales University of Technology (Construction) Act, 1951, which provided for construction on the Kensington site. It provided for the construction of a permanent building of brick and fire resistant materials - in part 3 floors & in part 4 floors - for the Schools of Physics, Chemistry, Mathematics, Mechanical & Drawing & Design, Geology & Mineral Engineering and the Administration, a lecture theatre and a cafeteria. Funds for the building (and a number of prefabricated buildings) were provided, estimated at 1,100,000 pounds, with expenditure limited to not more than 10 per cent above the estimate, including costs associated with furniture, equipment, electrical and mechanical engineering services, access roads, grounds & other incidental works.

A contract for the new building was let on the 11 January, 1951, to James Wallace & Co. Pty Ltd, for 689,274 pounds. As can be expected, bearing in mind the inexperience of Council members and the Architects in such matters, the plans of the building's interior were constantly changed. In fairness to the people concerned, however, they were prepared to acknowledge the deficiencies and amend the plans, at some considerable cost, to accommodate the changing circumstances and the requirements of staff, when appointed. Such actions did delay the project, as did shortages of materials and funds and industrial problems.

At a meeting of the Council on the 15 November, 1951, problems associated with the acquisition of suitable roofing materials for the Main Building were discussed - this building was later to lose its roof (on the 10 June, 1956), due to "poor design".

The top floor and part of the second floor were occupied by the School of Architecture & Building at the beginning of 1954. The remainder of the building was completed progressively.

The Main Building was opened by the Governor, Lieutenant General Sir John Northcott on the 16 April, 1955. At that time it housed the Schools of Applied Physics, Architecture & Building, Humanities and Social Sciences, Applied Geology and Mining Engineering and the University Administration. A Cafeteria and a Branch of the Library were added later.

The building was provided with a "striking piece of sculpture", 'The Falconer' by Tom Bass. It was seen as symbolising "the ideal that all technologists should have due regard to the aesthetic aspects of their work". The work cost 2,458 pounds.

The building was remodelled to provide an additional 1900 square feet of space on the lower ground floor for Production Engineering (first term 1956), and the Schools of Textile Technology (first term 1957 - 3 classrooms and a laboratory) and Applied Physics (first term 1957 - workshops and laboratories).

The Cafeteria was added in April, 1956. It seated 192 persons and catered for staff as well as students and served as a dining room for the student residences.

A severe storm damaged the roof and some brickwork on the building on the 10 June, 1956. The considerable damage was attributed to a design fault in the roof. Photographs of the damaged building are held in the University Archives.

In August, 1956, a large electronic computer, digital type, given the name UTECOM, was housed in the lower Ground Floor of the Main Building, together with an analogue computer.

The building was severely damaged by fire on the 5 October, 1957. The J.I. Carroll Research Laboratory was destroyed by the fire and was not replaced. The damaged area was replanned so as to give Physics more space. The reconstruction work was completed at the end of 1958.

It is difficult to determine an exact cost for the Main Building work as the records include costs associated with the storm and fire damage. However, an assessment sets the cost of the building and associated works (ie. street lighting, a telephone exchange, roads, an electricity sub-station, drainage and landscaping and treeplanting) at 1,256,478 pounds.

(ii) The Jockeys House/White House -C15

It is understood that this building was constructed in 1897 as the Jockeys' changeroom and weighing area for the Kensington Racecourse. It was used by the Army during its three occupation's of the site and it was used by the Migrant Hostel in 1948. The University first used the building in 1952 to house the University Regiment (the Regiment had previously been housed in an old converted hut at Ultimo). After the Regiment was relocated to the Western Campus, the White House was used firstly as the office of the Amenities Officer and subsequently as a Plumbers Workshop, offices for NIDA as from 1962 and in 1988 it became the Communications Law Centre.

(iii) Building B15

This building housed the Totalisator of the Kensington Racecourse. It was used by the Migrant Hostel for residential accommodation. It then formed part of the NIDA complex on the Kensington site until NIDA was transferred to its existing site on Anzac Parade. The "Old Tote" theatre took its name from this building.

(iv) Building B14d

This building was constructed as a recreation hall for the Migrant Hostel. It was used by the University as part of its student hostel. It subsequently became a theatre, (the first performance was given in 1963), and it is now the Figtree Theatre.

(v) Sporting Facilities

Sporting facilities are available at Kensington, Oatley, Daceyville and Little Bay.

The Village Green and tennis courts on the Kensington campus were the first sporting facilities provided on University land (there were tennis courts on the site originally but these were progressively removed to make way for buildings eg. there were courts near the site of Baxter College). Daceyville followed, then Little Bay and finally Oatley's range of facilities was added in 1990.

The facilities cover most sporting, recreational and health related activities.

In 1952 the NSW Rugby Union wanted to lease the Village Green for International, special and some grade games ; they offered to provide grandstands and all necessary amenities in return for a 99 year lease. The Building and Grounds Committee of University Council refused the offer on 10 March, 1952, because it was felt that the University could not afford to allocate, to one specific sporting activity, the bulk of the land that, at that time, was available for recreational purposes.

(vi) The Main Gate and Walkway

Rheem Pty Ltd demolished a colonial mansion at Rydalmere in 1962 and donated the verandah columns to the University, plus the money to re-erect them. The mansion was originally known as "Vineyard" but was subsequently renamed "Subiaco" when purchased by the Roman Catholic Church and turned into a Benedictine Monastery. The columns were erected, as an adjunct to the Main Walkway, and in the same form as they appeared in their original position (see the University's 1963 Annual Report and the Archives' Photo Collection).

The Main gates in Anzac Parade were handed over to the University, as a gift from the Monomeeth Association (parents of students) on the 2 August 1967 (see the University News).

(vii) Randwick

The acquisition of the various components that now constitute the Randwick campus presented problems to the University and the Government. As some sections were vested in the "Chief Minister", by the Centenary Celebration Act of 1887, it was necessary for an amendment act, the Centenary Celebration (Amendment) Act, 1966, to be enacted, so that the appropriate land and buildings could be vested in the Minister for Education. Furthermore, at least one other section was governed by a condition of the original Crown grant that would have had an impact on any future use, unless amended, and ownership was questionable in respect of another smaller parcel of land.

The original area of land (two and one quarter acres) and the associated building acquired by the University was part of the site and facilities of the Randwick Tramway Workshops. A non-ferrous foundry had been located on the site and this was subsequently converted for University use. The resumption of this parcel was gazetted on 30 December, 1960 but was subject to validating legislation. This parcel had a frontage to Darley Road and overlooked Centennial Park. An adjacent parcel was transferred to the Department of Technical Education at the same time. When attempts were

made to site buildings on the site, however, it was found that the dimensions were unsuitable. The University agreed, therefore, to a re-apportionment of the two areas which saw the University increase its holding to three and one half acres but lose the frontage to Darley Road. The headquarters of the Institute of Highway and Traffic Research and the Schools of Traffic Engineering and Highway Engineering were located on this site in 1962.

The Bursar at the time saw the potential in the adjacent Electrical Repair Shop, which was by this time idle and empty, and at his suggestion the Vice-Chancellor sought to have that parcel added to the University's holdings. Initially, the University rented the premises and from 1963 it was in use by the University (the University Press, the School of Entomology and the School of Architecture and Building). The Centenary Celebration (Amendment) Act, 1966, added this parcel to the University's holdings. The property at 35A Darley Road, originally used as the Medical Centre for the Workshops, was acquired, by resumption, on the 28 January, 1966, and was used, initially, as a Caretaker's Cottage.

In 1986 the Heritage Council identified several buildings on the campus as possible heritage buildings. No further action appears to have been taken on this issue.

Currently there are eighteen buildings on the campus and are used by:

- the Institute of Languages
- CERIT
- University Press
- Civil Engineering
- Chemical Engineering & Industrial Chemistry
- Building Research Centre
- Cornea Contact Lens Research Centre
- Eye Research & Technology
- Architecture
- SARC
- Applied Geology
- Communications & Network
- School of Optometry
- Student Housing
- Storage (Library & Administration)

(viii) Oatley and Paddington

The Oatley (St.George) and Paddington (College of Fine Arts) campuses became part of the University's property portfolio with the decision to close the "College of Advanced College" system as from the beginning of 1990.

The St.George campus initially was part of the Alexander Mackie C.A.E.

A modern, purpose built building, constructed in 1979, and some playing fields, are located on the site which is adjacent to Oatley Railway Station. The site was a former brick pit. In 1982 the campus became part of Sydney C.A.E.

The Paddington campus was also part of the Alexander Mackie C.A.E. and subsequently Sydney C.A.E. The City Art Institute was allowed to break away from Sydney C.A.E. in at the end of 1987 and, until 1990, operated in its own right. The campus was originally used for school purposes. It then became Alexander Mackie Teachers' College and with the creation of Alexander Mackie C.A.E. it was used as the specialist art campus of that institution. It has an old school building and several purpose built buildings, the last being completed in 1991.

19 USE OF HOSPITAL FACILITIES

Teaching Hospitals were required for the new Medical School which was to take its first students in 1961. Prince Henry Hospital was the first teaching hospital appointed and the arrangements made whereby the University Professors were also appointed as Heads of the hospital's clinical areas was the first such arrangement in Australia. The State Government provided almost \$6,000,000 to assist in the provision of appropriate auxilliary services and teaching facilities. The Prince of Wales Hospital was then added under the same conditions. The Royal Hospital for Women at Paddington was added for Obstetrics and Gynaecology and Lewisham, Sutherland, Bankstown, Canterbury and Royal South Sydney became associate teaching hospitals. Subsequent developments are not essential to this paper.

What is essential is that appropriate accommodation was needed in each hospital and with the exception of the Prince Henry Hospital where a building was constructed specifically for use by the University, all other "University" facilities in hospitals formed part of the particular hospital's stock of buildings (and still do in each hospital associated with the University). In most instances the facilities were and still are maintained by the hospital concerned and the University's presence is not formalised in any way eg the University does not hold a lease on the premises it uses. It is suggested that this arrangement is the result of the status of the staff involved and the roles they play within the University and the particular hospital concerned. It could lead, however, to disparities in accommodation and facilities depending upon the influence a particular staff member is able to exert on a Hospital Board but perhaps there are unwritten conventions which take care of such a possibility.

Information on the areas, currently occupied by the University in each hospital, is maintained by the Space Management Unit.

20 NEWCASTLE, WOLLONGONG AND BROKEN HILL

The Technical Education and New South Wales University of Technology Act of 1949 authorised the University to establish and maintain branches, departments or colleges of the University at Newcastle, Wollongong, Broken Hill or such other place in the State as the Council deemed fit. The three locations mentioned specifically had technical colleges with some Diploma standard courses.

The University did establish a presence in each of the specified locations and at Newcastle and Wollongong this led to the establishment of autonomous Universities in 1965 and 1975 respectively. At Broken Hill the early work led to the establishment of The Broken Hill Division of the University of New South Wales in 1959. In 1967 it was named the W.S. & L.B. Robinson University College. However, it was not practicable to maintain the impetus and the Broken Hill campus was closed at the end of 1984. However, action is only now being taken to dispose of the University's holdings in Broken Hill.

Some teaching was conducted in Lithgow and Orange for short periods also but these initiatives could not be sustained.

Each of these initiatives into country centres had to be financed from the University's allocation of funds and prior to the Murray Report, particularly in respect of buildings and grounds, this placed considerable strain on each of the parties. The University of New South Wales still had some of its teaching and research activities housed at Ultimo and was anxious to see an increase in building activity at Kensington. On the other hand money had to be found for the initiatives in these country centres.

It is not appropriate to explore these issues further in this document. It is suggested that any reader wanting further details of this fascinating chapter of the University's life should read Willis' book, Chapter 9, and Fraser's unpublished history.

21 SOME INTERESTING TRIVIA

The old Tote building was once used by the Basser Rowing Club as its clubhouse.

There are a number of watercolour and pencil sketches, held in the Archives, of various buildings eg. a watercolour by T.A.Bulmer of the Schools of Medicine & Biological Sciences Buildings dated 1969, a pencil sketch of the Library, stage 2, and a watercolour of the gates on Anzac Avenue.

Initially the buildings were identified either by a descriptive name eg. Main Building, or an alphabetical letter eg. A,B,F,M. Building A became the Heffron Building, B became the Wallace, F became the Webster and M is now G2.

A Chapel/Religious Centre was proposed for a site near the Union. Floor plans were prepared by Buddin, Nangle & Michael in 1963 which showed a Chapel with seating for 100 persons and with large doors opening onto an outdoor area to cater for any overflow and 6 offices for Chaplains. The University News of 24 March, 1964, gave details of the proposal. No further action seems to have been taken.

The J.J.Carroll Research Laboratory, which was destroyed by fire in 1957 and not replaced, was the first facility of its kind in Australia to have a geiger counter X-Ray spectrometer.

One-third of the ground floor of the Dalton Building was designed as an open concourse. The columns in the concourse were covered with black mosaic tiles and on the open wall surfaces there were murals of multicoloured mosaics, designed by Douglas Annand and fabricated in Italy.

The first building provided for research purposes was the McLean's building at Ultimo. It contained 21,000 sq.ft.

Responsibility for examinations was not given to the University until 1957 and even then the Department of Technical Education retained an oversight.

Willis, A.H., "The University of New South Wales, The Baxter Years". University Press, 1983.

(ii) Legislation:

Act 11, 1949	Technical Education and New South Wales University of Technology Act, 1949 - provided for the establishment and incorporation of a New South Wales University of Technology - allowed the university to purchase, hold, grant, alienate, demise or otherwise dispose of real and personal property - allowed the university to establish centres at Newcastle, Wollongong and Broken Hill or such other places as the Council deems fit
Act 35, 1951	New South Wales University of Technology (Construction) Act, 1951 - allowed for buildings to be erected on the Kensington site - provided funds for first buildings
Act 8, 1955	Technical Education & New South Wales University of Technology (Amendment) Act, 1955 - allowed for the titles of Chancellor, Deputy-Chancellor and Vice-Chancellor
Act 24, 1958	University of New South Wales Act, 1958 - allowed for a change of name to the University of New South Wales, extended the objects of the University to include instruction and research in medicine and arts and allowed the University to operate on a calendar year for financial purposes
Act 49, 1961	University of New South Wales Act, 1961 - this act was important for "building" purposes because it allowed for unexpended balances of recurrent grants to be carried forward
Act 36, 1966	Centenary Celebration (Amendment) Act, 1966
Act 37, 1968	University of New South Wales Act, 1968
Act 170, 1978	University of New South Wales (Amendment) Act, 1978 - allowed for the transfer and acquisition of land
Act 125, 1989	University of New South Wales Act, 1989

(iii) Photographs

There is a range of photographs held in the Mitchell Library and the State Archives. Among them are photographs of:

Kensington Racecourse 13 May, 1943.

Recreation Hall, Old Tote Theatre, Jockeys House - Photo 32606 Government Printing Office.

View of Old Tote Theatre & Jockeys House with Grandstand area vacant - 1958.

View from upper floor of Chemistry building, taken by Max Dupain before view was blocked by other buildings.

Bushmans' contingent, 1900 - Kensington Racecourse.

However, the University Archives holds by far the best collection of photographs of the University and its activities. Many of these photographs relate to the buildings and grounds eg. buildings under construction, the storm and fire damage to the Main Building etc. This collection contains photographs taken by photographers officially retained by the University. The most famous of these was Max Dupain who undertook numerous assignments for the University from 1959 to 1973. In recent years the University has employed a full-time photographer and photographs taken by this officer are eventually transferred to Archives. Photographs taken by the Property and Works Department are to be found also in the Archives.

(iv) Plans

The following plans are held in the University Archives:

Chancellery site + floor plans - CN/515
Residential College site plans -CN/063
Newcastle University College - Shortland site & floor plans - CN063
UNSW site plan 1960 - CN366
Union Stage 1
Union Stage 2 Blockhouse
Grandstand - Phillips Field
Parking Station near AGSM, Stage 1 & Stage 2
New lift, School of Architecture
Boathouse, Hunters Hill - Stage 1
School of Civil Engineering - new first floor & alterations
The Derwent Building - Stage 2
Baxter College - new recreation rooms
(this includes a 1972 site plan)
Maintenance Workshop - extension, 1974
Lecture Theatres, 1964
International House, 1966
Main Building, 1961 - Archives
1959 Site Plan, CN850
1947 - A preliminary study of the Kensington site, CN850

A much wider range of plans and specifications are held in the Minor Works and Maintenance Branch of the Property and Works Department. These are not catalogued at this time.

(v) Other

All records of the Randwick City Council were destroyed by fire in 1955. That source of verification of material was not, therefore, available.

Surprisingly, the Department of Public Works in N.S.W. does not hold much of the early planning, sketch and working drawing material for the University.

Discussions held with members of the Randwick Historical Society and Mrs J.Begbie, a long term resident of the area and currently of 30 Botany Street, Kensington, revealed no knowledge of any "migrant" hostels in the area. The Australian and State Archives have no obvious material about the hostels. However photographs held by the University Archives and the Mitchell Library clearly identify such an activity as do various references found in University Council papers and records. Harry Reed recalls that there were "immigrants" on the site. Fraser also refers to the migrant hostel. Kevin Matthews, a long serving member of the Property and Works staff confirmed the information relating to the use of the grandstand as a kitchen for the hostel.

Many early University files could not be located (in no way due to a lack of help from the Record Administration Section staff and the staff of the University Archives) and no record of appropriate "technical education" files could be found.

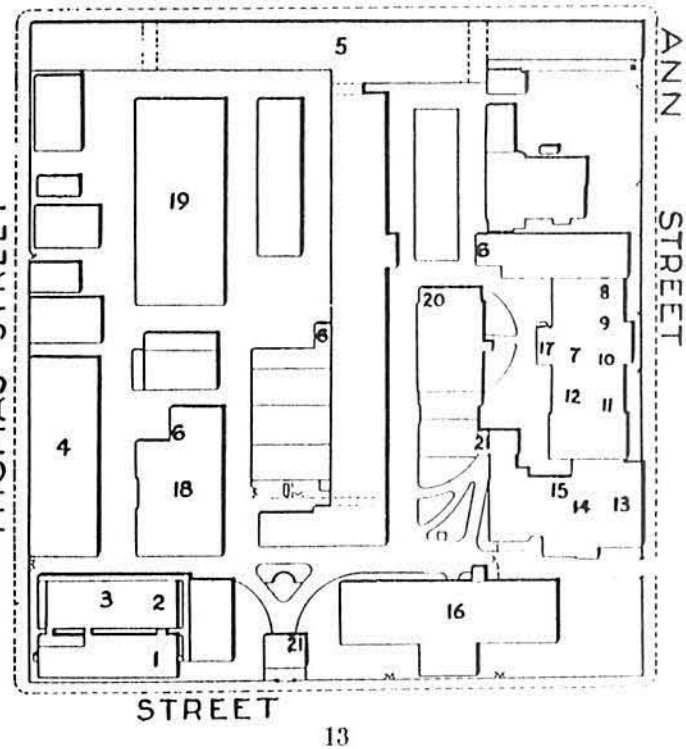

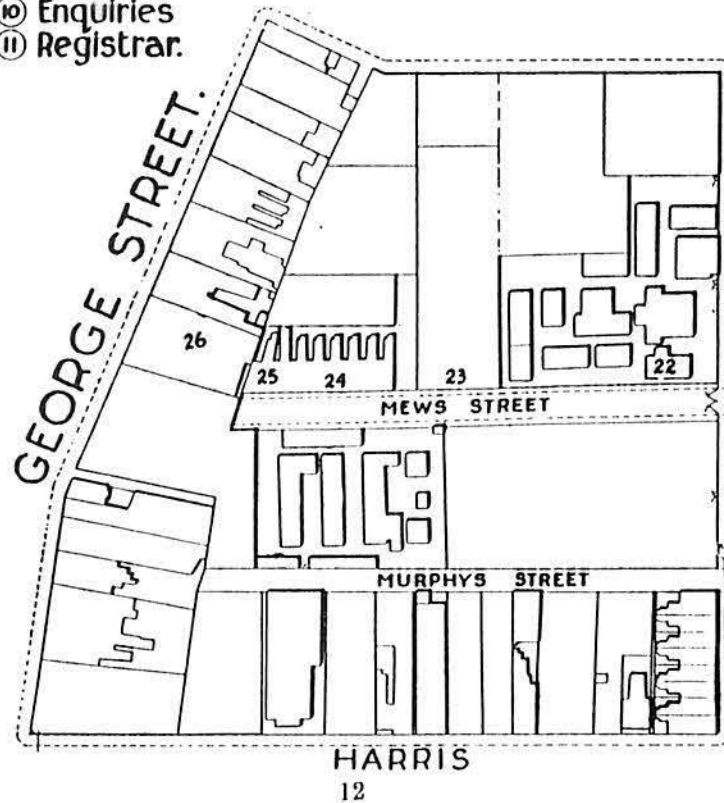

There is an interview with Harry Reed held in the University Archives.

The Australian and State Archives were searched but contained little useful material.

The University Archives was the major source of the material and the help willingly given by Mr. Laurie Dillon and his staff is again acknowledged.

APPENDIX A(iii)
THE KENSINGTON CAMPUS 1966 -

B Property and Works Department Establishment Register

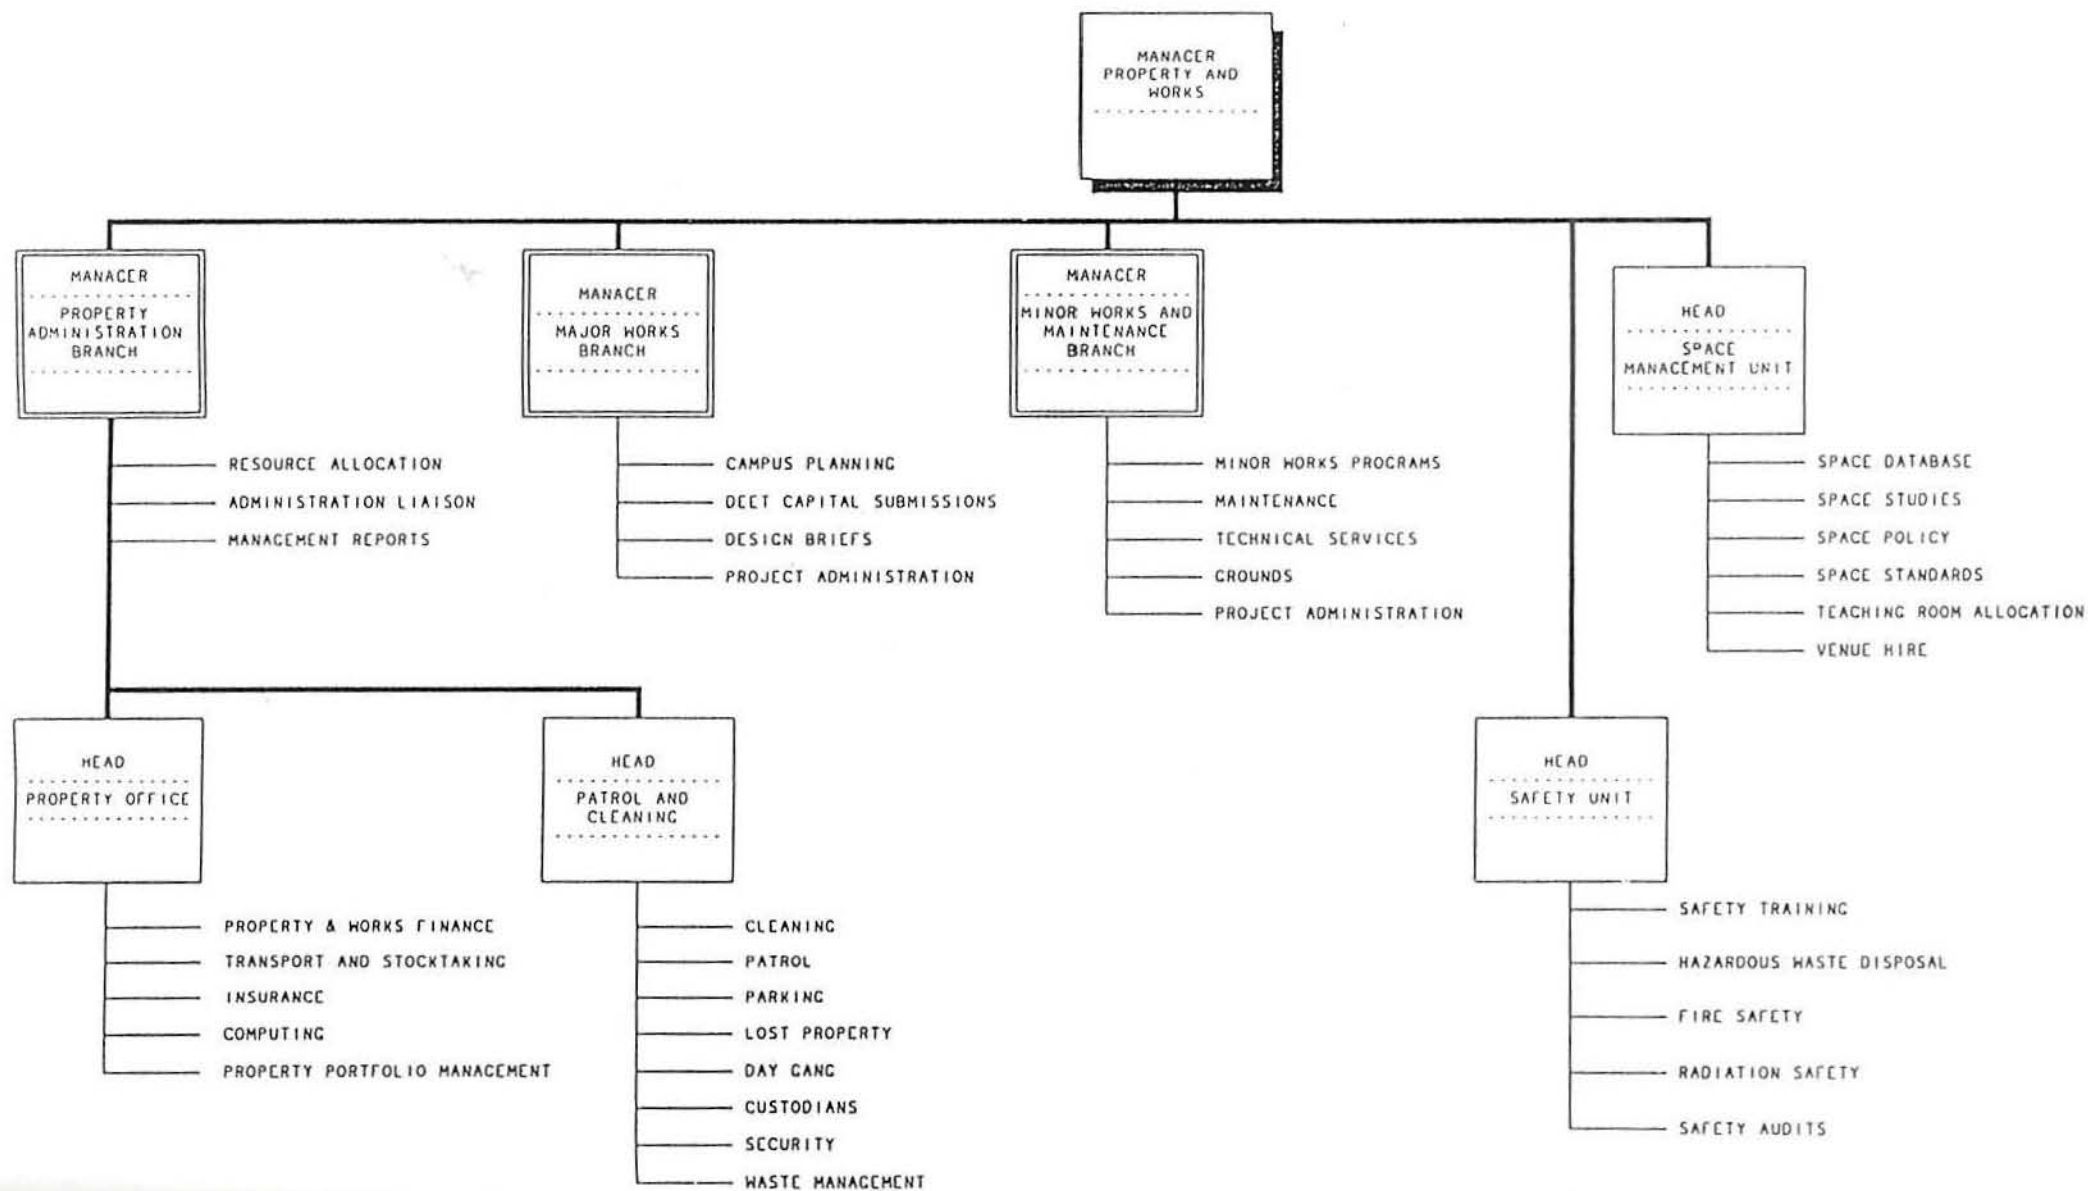

The functions of acquiring land and buildings, planning, designing, constructing and maintaining buildings and grounds and the associated support services have been performed since the University was established. Initially these tasks were the responsibility of the Technical Education Branch which was supported by the services of the Public Works Department and in particular its Government Architect's Branch.

As the University developed it gradually assumed responsibility for these activities and to undertake the work maintenance, gardening and then architectural and other professional staff were employed. The services provided by the Public Works Department were still used for some years but gradually the staff of the University grew in confidence, ability and knowledge to the point where the University was able to manage its own program and began using both its own staff and private consultants, engineers and architects to plan and design facilities, arranging its own building contracts and undertaking its own maintenance work.

New functions also emerged that saw new skills and knowledge needed eg safety issues, space management. The functions are now such that they are divided, within the Property and Works Department, into three major Branches and two smaller units with the major branches being subdivided into smaller specialist areas.

The current Establishment Register for the Property and Works Department is shown on the next page.

PROPERTY AND WORKS DEPARTMENT

C A selection of photographs

- (i) shows the site before work commenced on the Main Building
- (ii) shows the first buildings erected on the site at Kensington. These were prefabricated buildings and are still in use. The buildings behind the fence were used as the first student hostel
- (iii) shows the Main Building nearing completion, late 1954
- (iv) shows the Petroleum Engineering Centre under construction, 1955
- (v) Heffron under construction, 11/2/60
- (vi) the Roundhouse under construction, 1960
- (vii) shows the Engineering complex under construction in 1961 - view from Heffron with Webster on right and Biological Sciences on skyline
- (viii) in the foreground are the buildings of the Schools of Chemical Engineering and Chemical Technology. High Street bounds the campus on the northern side. The new one-storeyed workshop can be seen in front of the fig trees which screen Basser College. On the high ground to the east rise the buildings of the School of Biological Sciences and the Medical School. The solar furnace in the course of construction is seen in front of the new Chemistry building with the Dalton Building and the Main Building to the right, August, 1960
- (ix) biological sciences and medical school under construction, December, 1961
- (x) shows an aerial of the site in 1962.
- (xi) shows the site in 1964.
- (xii) shows the site of Civil Engineering, December, 1964
- (xiii) Goldstein Hall under construction with the Old Tote precinct at left
- (xiv) Baxter College site 1965
- (xv) the site 1965
- (xvi) Upper Campus development, 1965
- (xvii) Applied Science, 1969
- (xviii) the Commerce Courtyard about 1968
- (xix) shows an aerial of the site in 1990.
